

Great Savings

Homeowners

You can rest assured that when you install wood post with the Titan Post Anchor™ you will have longer lasting posts that are higher and drier off wet surfaces. **Do it once! Do it right!**

Builders

Save big on reduced labor with no more shimming, leveling and notching posts and deck boards.

Offer your customers a long term solution that meets their aesthetic expectations.

Adaptable to/as:

- any custom wood railings
- many composite railings
- aluminum railing sections
- glass panel railing sections
- various railing stiles and balusters
- covered newel posts for stairs
- sign posts
- small fence sections
- concrete, wood, fiberglass or vinyl surfaces
- gazebos, pergolas
- support posts

Accessorize

For the sharpest dressed posts in town consider using our metal snap fit post skirts that are galvanized and powder coated or stainless steel. Available in Black, Brownstone, Gray, and White to match vinyl post sleeves.

For waterproof installations try our EDPM rubber gasket systems for wet environments or on concrete in freeze/thaw climates.

Size and Species of Wood

The standard Titan Post Anchor™ is designed to work with wood posts ranging from 3.5" x 3.5" to 4" x 4".

It also works best with soft woods like cedar, redwood and pressure treated pine.

Exotic hardwoods, fir and composites are more dense and require special installation instructions which are included with each purchase.

Ordering Your Post Anchors Is Easy

The ordering process is so simple. Just call us direct at 866-577-8868. Or enjoy the convenience and buy locally from one of our authorized distributors.

If you are ready to order right now order online at www.ideasfordeckdesigns.com/order.html. All shipments are handled expeditiously and shipped exclusively through UPS.

Go ahead. You deserve the best! Make your deck special and your investment last longer and longer with the Titan Post Anchor™.

Titan Building Products

www.ideasfordeckdesigns.com

The first solid steel tube technology to drive up inside wood posts creating beautiful, strong, hidden anchoring connections.

US and Foreign patents pending

The Titan Post Anchor™ is a wood post anchoring device that blends form and function in a way never before conceived.

Attaching wood posts to any horizontal surface for railings or as stand alone components for signs, gates, small fences, gazebos, pergolas and more is now quick and easy and best of all – greatly extends lifespan.

Form

The patent pending tube technology of the anchor approaches the age old problem of attaching surface mounted posts to decks from a completely different perspective.

The sharp tube pierces into the solid wood core of the post and is hidden internally to create a post to deck connection that is clean and inconspicuous – even to the most discerning homeowners.

The innovative design of the anchor even allows for a transverse bolt or self-tapping screw to be driven just above the anchor base through the post wall and through the tube – completely inside the post for even higher performance if desired.

Function

The tube is mechanically fitted into the base and welded for an extremely highend durable connection. The tube penetrates the post so that immense friction prevents it from being easily levered off the base like standard screws and a flat plate. The post remains high and dry making it virtually maintenance free and vastly extending its lifespan.

Steel

The Titan is made from heavy gauge formed galvanized steel and welded for maximum durability. The powder coat finish gives it a clean durable finish to withstand the elements.

Strength

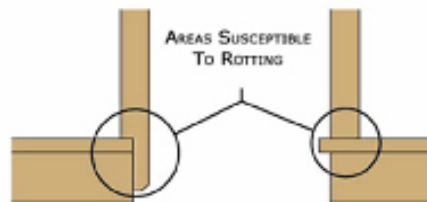

The Titan Post Anchor has performed very well under lab destruction tests. A single unsupported 4x4 pine post withstood an average concentrated point load of 336 lbs. A 42” 6x6 post withstood an average load of 503 lbs.

Depending on your project design, you can increase the performance of your structure even further. Contact us for our ongoing engineer reports.

Longevity

Rot starts where water regularly pools and collects. The Titan Post Anchor™ lifts the post up off the deck. It stays dry so your posts won't rot. Traditional construction methods leave wood posts vulnerable to moisture – and rot.

Quicker Installation

- 1 Make circular pilot cut using hole saw center guide. Dive hole saw down.
- 2 Insert tube into pilot cut. Hammer tube.
- 3 Drive in lags.

It takes minutes to install
